

Inman Mills Water District – (System # 4220001)

Water Quality Report for 2009

This Water Quality Report is for the calendar year 2009. The information in this report was assembled from various sources such as:

1. South Carolina Department of Health and Environmental Control (SCDHEC) laboratory results.
2. SJWD laboratory results.
3. Commercial laboratory results.

On behalf of the Commissioners of the SJWD Water District, I am happy to provide you, our customer, the following information about your drinking water. During 2009, the treated water leaving the treatment plant met all the USEPA and SCDHEC regulations.

SJWD Water District Mission:

Our mission is to provide excellent quality water and service to our current and future consumers while continuously improving cost effectiveness. We accomplish this through the efforts of our employees, by developing them to their full potential, through sound business practices and through timely application of emerging technologies.

About Inman Mills Water District:

What is the source of my water?

IMWD draws water from three wells located within the Inman Mills property. The water comes from fractured bedrock aquifers in the Piedmont Geological Province.

SCDHEC is required by the Safe Drinking Water Act Amendments of 1996 to perform a delineation and assessment of each watershed in South Carolina, which is used as a drinking water source. SCDHEC has prepared a plan of action for approval by the U.S. Environmental Protection Agency (USEPA). The Assessment Plan is available for your review at www.scdhec.gov/water/html/srcwtr.html. A copy of the plan is available at the SJWD office.

SUMMARY

This report contains the completed groundwater susceptibility assessment for the Inman Mills WD, System No. 4220001. The system includes public supply wells: G42117, G42118, and G42120. The system is located in Spartanburg, South Carolina and serves a primary population of 748. The system is located in Vulnerability Area 1 in the Piedmont physiographic province. The source aquifer is unconfined. Of the 5 potential contaminant sources (PCSs) in this initial inventory, 5 PCSs had more than one category of contaminants. The inventory includes 3 PCSs with volatile organic compounds (VOCs), 1 PCSs with petroleum products, 3 PCSs with metals, 3 PCSs with nitrates, 2 PCSs with pesticides/herbicides, 2 PCSs with pathogens, no PCSs with radionuclides, and 1 PCSs with undetermined contaminants. The susceptibility analysis determined 5 PCSs with a high susceptibility ranking, no PCSs with a moderate susceptibility ranking, and no PCSs with low susceptibility ranking.

How is my water treated?

The IMWD Water District treatment facility uses USEPA and SCDHEC approved methodologies for making sure your water meets all drinking water requirements. The water is chemically treated with chlorine to kill disease-producing organisms. A small amount of a phosphate chemical is added to help inhibit corrosion of the metal distribution pipes and sequester small amounts of manganese.

What if I Have Questions About My Water or This Report?

If you would like more information about your water quality, the treatment process, or information in this report, you may contact us by calling 864-439-4423.

During December 2009, The IMWD was served by water from the Inman-Campobello Water District (ICWD) while the IMWD storage tank on "C" street was being cleaned and painted inside. Enclosed you will find a copy of the ICWD 2009 CCR. If there are questions about the ICWD report, please call the number listed in that report.

How Can I Be Involved?

The Commissioners of SJWD Water District hold monthly meetings at the SJWD administration office (307 Spartanburg Highway, Wellford, SC). These meetings are open to the public and an agenda is posted in the lobby of our administration office. Please contact us in advance if you wish to be included on the agenda. For more information, please contact us at 864-439-4423.

Thank you for the interest you have in your water system.

Sincerely,

Mike Caston, Executive Director

Regulated Contaminants

The US Environmental Protection agency regulates more than 90 potential contaminants in public water supplies. SC DHEC administers this regulatory program in South Carolina.

Contaminants are analyzed on a one to five year basis. Critical contaminants are analyzed on a more frequent basis, such as chlorine, which is checked daily. The 11 contaminants listed below were detected but the levels were below the regulated maximum contaminant level (MCL). The remaining contaminants that were analyzed were not detected during this sampling period. This sampling period covers 2009.

Inorganic Contaminants

Contaminant (units)	MCL	MCLG	IMWD	Range	HDL	Violation	Source	Year of analysis
Chlorine (mg./l.)	4	4	0.43	0.21-0.81	0.81	N	Water additive to control microbes	2009
Nitrate Nitrogen (mg./l.)	10	10	2	2.2-2.2	2.2	N	Naturally occurring and fertilizer runoff	2009
Nitrite Nitrogen (mg./l.)	1	1	0.14	N/A	0.14	N	Naturally occurring and fertilizer runoff	2004
Contaminant (units)	Action Level	MCLG	90 th percentile	Range		N	Source	Year
Copper (ppm)	1.3	1.3	0.41	0.00-0.42	0.42	N	Corrosion of household plumbing systems	2009
Lead (ppb)	15	0	0	0	0	N	Corrosion of household plumbing systems	2009

Microbiological Contaminants

SJWD collected and analyzed 25 samples from the IMWD distribution system for total coliform bacteria during 2009. All routine samples were absent for coliform bacteria.

Health Effects: Coliforms are bacteria that are naturally present in the environment and are used as an indication that other, potentially harmful, bacteria may be present.

Contaminant	Maximum Contaminant Level goal	Maximum Contaminant Level	Highest # (P)	Violation	Source	Year
Total Coliform For IMWD System	0	5% of monthly samples (P)	0	N	Naturally present in the environment	2009
Fecal Coliform For IMWD System	0		0	N	Naturally present in the environment	2009

Organic contaminants

Contaminant (units)	MCL	IMWD	Range	Violation	Source	Year of analysis
Total Trihalomethanes (ppb)	80	0	0	N	Byproducts of Disinfection	2008
Haloacetic Acids (ppb)	60	0	0	N	Byproducts of Disinfection	2008

Radioactive Contaminants (2005 data)

Contaminant (units)	MCL	IMWD	Violation	Source	Year of analysis
Gross Alpha (pCi/L) Excluding radon and uranium	15	3.4	N	Erosion of natural deposits	2005
Combined Radium (226/228) (pCi/L)	5	1.4	N	Erosion of natural deposits	2005

Gross alpha. Certain minerals are radioactive and may emit a form of radiation known as alpha radiation. Some people who drink water containing alpha emitters in excess of the MCL over many years may have an increased risk of getting cancer.

The abbreviations used above are defined as:

IMWD = Inman Mills Water District; SJWD = SJWD Water District

SCDHEC = South Carolina Department of Health and Environmental Control

MCL = Maximum Contaminant Level – The highest level of the contaminant that is allowed by the current regulations.

MCLG = Maximum Contaminant Level Goal – The level of a contaminant in drinking water below which there is no known or expected health risk.

mg./l. = milligrams per liter. ppb. = parts per billion

Action Level = The concentration of a contaminant that triggers treatment or other requirements that a water system must follow. Action Levels are reported at the 90th percentile for homes at greatest risk.

pCi/L = Picocuries per liter is a measure of the radioactivity in water.

TT = Treatment Technique – A required process intended to reduce the level of a contaminant in drinking water.

N/A = Not applicable or data not available. ND = Not Detected HDL = Highest Detected Level

(A) = absent for organism (P) = present for organism

(Y) = yes (N) = no

Information about Drinking Water Quality

- The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).
- Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline (800-426-4791).
- Contaminants that may be present in source water include:
 - Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
 - Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
 - Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses
 - Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff and septic systems.
 - Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.
- In order to ensure that tap water is safe to drink, USEPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. The Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water, which must provide the same protection for public health.

Este informe contiene informacion muy importante sobre su agua de beber si no lo comprende, hable con alguien que se lo pueda explicar.
